Learning Objectives. Determine amounts of reactants or products in aqueous solutions. As we learned previously, double replacement reactions involve the reaction between ionic compounds in solution and, in the course of the reaction, the ions in the two reacting compounds are "switched" (they replace each other). Because these reactions occur in aqueous solution, we can use the concept of ...

Understanding how to derive moles from solution quantities is key to this work. At this point, I show the molarity formula again, and explain that it is possible to calculate moles if you know the concentration (M) and the amount of solution you have (ml). I note that to convert ml to L, you must divide the ml by 1,000.
