Coolant Temperature Sensor Replacement Cost Guide. The sensor is a pretty simple electrical device which has a resistor built in that is sensitive to temperature. It has a plug on one end and a probe on the other end that extends into the coolant. It is either screwed or pressed into position and usually fairly easy to replace.

2020 Coolant Temperature Sensor Replacement Cost Guide

Coolant is necessary to keep the engine from overheating during combustion, so when that sensor breaks down, the car won't know when to provide coolant to keep the engine at the right temperature. To have this sensor replaced, you will pay somewhere between \$95 and \$140, depending both on the car you have and the mechanic's fees.

The Complete Coolant Temperature Sensor Replacement Cost Guide

You will need to remove the two air inlet ducts as well as the front engine cover to get access to the coolant temperature sensor on the front of the engine. Remove each duct by compressing them towards the engine and slipping them off the air inlet. With the ducts off remove the front engine cover. It pulls up and away from the engine.

Mercedes Coolant Temperature Sensor Replacement

The engine coolant temperature sensor is responsible for sending the temperature of the engine to the DME and the instrument cluster. It is a four wire sensor, with two separate circuits, one for the instrument cluster and one for the DME. If you have a coolant sensor fault code stored in your DME and your engine isn't running right, I suggest replacing the sensor before digging too deep.
